ACCIDENTS DON’T “JUST HAPPEN” IN THE WORKPLACE. ACCIDENTS ALWAYS HAVE CAUSES, WHICH MEANS THAT ACCIDENTS ALWAYS CAN BE PREVENTED.

Primary Causes Of Accidents
✓ An accident is an unplanned and unwanted event which may or may not cause injury and/or property damage
✓ The great majority of accidents result from unsafe conditions or workers committing unsafe acts
✓ 88% of accidents are caused by unsafe acts
✓ 10% of accidents are caused by unsafe conditions
✓ Unsafe acts usually can be attributed to Personal Factors
✓ Unsafe conditions often result from Job Factors

ALL Accidents can be prevented
✓ Safety education and training, along with enforcement, are the best ways to keep people from committing unsafe acts
✓ When workers fail to follow rules, enforcement becomes necessary
✓ To prevent future occurrences, accidents are investigated
✓ Accident investigations generally have three parts: Accident Response, Accident Investigation, and Corrective Actions
✓ It’s essential that each employee take an active role in staying safe on the job
✓ No matter how many times you’ve done a procedure, it’s critical that each step is followed every time
✓ **YOU** are the key to accident prevention in our workplace
