Spill Prevention while Re-fueling

Here are some basic safe-fueling tips to follow when re-fueling:

- **Before fueling turn off engine.**
- **Keep hand in contact with the pump nozzle throughout the refueling process.**
- **Do not use an automatic pump-handle device. If nozzle is equipped with such a device it should be removed.**
- **Do not use a rock, wood, etc. to wedge the pump handle so that the tank will fill automatically.**
- **Immediately wipe up / clean up any spilled product.**
- **Never smoke or strike a match while fueling.**
